Research Interest

I am interested in ***meta-learning***, ***uncertainty estimation***, and ***domain adaptation*** for machine learning and computer vision. In particular, my research focuses on ***learning with imperfect data*** (e.g., limited, noisy, or imbalanced) under ***minimal human supervision***, while enabling effective ***extrapolation and adaptation to unseen domains*** beyond the training set. Application-wise, I am working on ***medical imaging*** and ***animal behavior analysis***, where handling limited data with minimal supervision is vital.
